# TAB-2000N ~ 5000 Air Circuit Breaker

# Specification of TAB series

Type	TAB-2000N (Frame I, Inm=2000A)				TAB-3200 (Frame II, Inm=3200A)				TAB-5000 (Frame III, Inm=5000A)					
Feature														
Installation mode	Fixed		Drawout		Fixed		Drawout		Drawout					
Number of poles	3	4	3	4	3	4	3	4	3	4				
Rated current(In)(A) at ambient temperature 40℃	630 1000 1600 800 1250 2000				2000 2500 3200				4000 5000					
Max. rated operation voltage (Ue) V(50/60Hz)	AC 690V													
Rated insulation voltage (Ui) V(50/60Hz)	AC 1000V													
Rated impulse withstand voltage (Uimp) kV	12													
Rated current of N-pole (A)	—	100%	—	100%	—	100%	—	100%	—	50%				
Rated breaking capacity(kA)														
IEC 60947-2 CNS 14816-2 Icu / Ics	* AC 690V		50 / 40				65 / 52				85 / 75			
	* AC 500V		65 / 42				75 / 60				90 / 70			
	* AC 440V		75 / 48				85 / 68				100 / 80			
	AC380V		85 / 55				100 / 80				130 / 105			
	* AC220V		150 / 95				170 / 136				200 / 160			
Rated short-time withstand capacity Icw Is(kA)	AC 380V		55				65				100			
Overload long time-delay protection	I <sub>R</sub> =(0.4~1.0) I <sub>n</sub> , t <sub>R</sub> = (15~480) s													
Fixed disconnection time(ms)	23~32													
Digital trip relay	Standard type(M)						●				●			
	Multifunctional type(3M)						●				●			
	Communication type(H)						●				●			
Mechanical endurance	10,000													
Connection pattern	Horizontal , Vertical										Horizontal			
Dimensions(mm) 	Horizontal	a	340	435	375	470	400	515	435	550	813	928		
		b	402	402	439	439	402	402	439	439	439	439		
		c	290	290	391	391	290	290	391	391	391	391		
		d	42	42	30.5	30.5	72	72	100	100	103	103		
	Vertical	a	340	435	375	470	400	515	435	550	—	—		
		b	402	402	439	439	402	402	439	439	—	—		
		c	290	290	391	391	290	290	391	391	—	—		
		d	69	69	74	74	99	99	145	145	—	—		
Shunt release (Standard accessory)	AC 110 / 220 / 380V· DC 110 / 220V (Optional)													
Closing electromagnet (Standard accessory)	AC 110 / 220 / 380V· DC 110 / 220V (Optional)													
Auxiliary contact (Standard accessory)	4C													
Motor-driven energy-storage mechanism (Standard accessory)	AC 110 / 220 / 380V· DC 110 / 220V (Optional)													
Optional accessories	Under-voltage release (UVT)		AC 110 / 220 / 380V 、 DC 24 / 110 / 220V (Optional)											
	External leakage zero sequence current transformer		●											
Weight(kg)	Drawout(3poles/4poles)		70 / 84 (1600A) below 79 / 90.5 (2000A)				103 / 130				210 / 233			
	Fixed(3poles/4poles)		44 / 52 (1600A) below 45 / 54 (2000A)				56.5 / 71				—			

Note: 1. \*: Provided for reference (The rated breaking capacities indicated by voltage which marked with \* are for reference.)  
 2. ●: Available , —: Not available  
 3. Users must add PT, if operational voltage to exceed AC380V

| 8. “Ir” light     | Overload long delay fault indication   |
| 9. “Isd” light    | Short-circuit Short delay indication   |
| 10. “test”        | Trip test button   |
| 11. “Ii” light    | Instantaneous Short-circuit fault indication   |
| 12. “Ig” light    | Asymmetric earthing or neutral line fault indication   |

Note :

Overload long time-delay protection :

$I_R=(0.4\sim 1)I_n$ ,  $t_R=(15\sim 480)s$ ;

Short-circuit short-delay protection :

TAB-2000N :  $I_{sd}=1.5I_R\sim 15I_R$  ;

TAB-3200 :  $I_{sd}=1.5I_R\sim 15I_R$ ,  $I_{sd}$  shouldn't be more than 40kA;

TAB-5000 :  $I_{sd}=1.5I_R\sim 15I_R$ ,  $I_{sd}$  shouldn't be more than 50kA;

$t_{sd} = (0.1\sim 0.4)s$

Instantaneous protection :

TAB-2000N :  $I_i=1.5I_n\sim 50kA$ ;

TAB-3200 :  $I_i=1.5I_n\sim 65kA$ ;

TAB-5000 :  $I_i=1.5I_n\sim 75kA$ ;

Earthing protection :

TAB-2000N :  $I_g=(0.2\sim 0.8)I_n$ ,  $I_g$  shouldn't be more than 1200A;

TAB-3200 :  $I_g=(500\sim 1200A)$ ;

TAB-5000 :  $I_g=(500\sim 1200A)$ ;

$t_g = (0.1\sim 0.4)s$

## Multifunction type (3M type) and communication type (H type)

### Menu operation explanation of digital trip relay

3M/H Type digital trip relay

- |                         |  |
|-------------------------|--|

42	ZSI(zone selective interlocking)	—	○	○

● : stands for definite setting   ○ : stands for optional setting   — : stands for no function

Note 1 : 3M type product can choose control shunt load function.

## ▶ Standard type(M type)

Overload long time-delay protection :

$$I_R = (0.4 \sim 1) I_n, t_R = (15 \sim 480) s;$$

Short-circuit short-delay protection :

$$TAB-2000N : I_{sd} = 1.5 I_R \sim 15 I_R ;$$

TAB-3200 :  $I_{sd} = 1.5 I_R \sim 15 I_R$ ,  $I_{sd}$  shouldn't be more than 40kA;

TAB-5000 :  $I_{sd} = 1.5 I_R \sim 15 I_R$ ,  $I_{sd}$  shouldn't be more than 50kA;

$$t_{sd} = (0.1 \sim 0.4) s$$

Instantaneous protection :

$$TAB-2000N : I_i = 1.5 I_n \sim 50 kA;$$

$$TAB-3200 : I_i = 1.5 I_n \sim 65 kA;$$

$$TAB-5000 : I_i = 1.5 I_n \sim 75 kA;$$

Earthing protection :

$$TAB-2000N : I_g = (0.2 \sim 0.8) I_n, I_g \text{ shouldn't be more than } 1200A;$$

$$TAB-3200 : I_g = (500 \sim 1200A);$$

$$TAB-5000 : I_g = (500 \sim 1200A);$$

$$t_g = (0.1 \sim 0.4) s$$

## ▶ Multifunctional type(3M type) and Communication type(H type)

Overload long time-delay protection :

$$I_R = (0.4 \sim 1) I_n, t_R = (15 \sim 480) s;$$

Short-circuit short-delay protection :

$$TAB-2000N : I_{sd} = 1.5 I_R \sim 15 I_R ;$$

TAB-3200 :  $I_{sd} = 1.5 I_R \sim 15 I_R$ ,  $I_{sd}$  shouldn't be more than 40kA;

TAB-5000 :  $I_{sd} = 1.5 I_R \sim 15 I_R$ ,  $I_{sd}$  shouldn't be more than 50kA;

$$t_{sd} = (0.1 \sim 0.4) s$$

Instantaneous protection :

$$TAB-2000N : I_i = 1.5 I_n \sim 50 kA;$$

$$TAB-3200 : I_i = 1.5 I_n \sim 65 kA;$$

$$TAB-5000 : I_i = 1.5 I_n \sim 75 kA;$$

Earthing protection :

$$TAB-2000N : I_g = (0.2 \sim 0.8) I_n, I_g \text{ shouldn't be more than } 1200A;$$

$$TAB-3200 : I_g = (500 \sim 1200A);$$

$$TAB-5000 : I_g = (500 \sim 1200A);$$

$$t_g = (0.1 \sim 0.4) s$$

Note: Follow Modbus or Profibus+Dp (optional module) communication protocol.

## Specifications of characteristics

### Over-current protection characteristic curve

### Overload long time -delay protection :

Current Ratings Range ( $I_R$ )	tolerance	Current	Action time(s)	Time tolerance
(0.4~1) $I_n$ (OFF can turn off this feature)	$\pm 10\%$	$\leq 1.05 I_R$	>2h Non-trip	
		$> 1.30 I_R$	<2h trip	
		$1.5 I_R$	15 30 60 120 240 480	$\pm 10\%$
		$2.0 I_R$	8.4 16.9 33.7 67.5 135 270	$\pm 10\%$

◆ Short-circuit short-delay protection :

Short-circuit short delay protection has two protection modes. One is inverse time and definite time protection.  $I^2Tsd=(8I_R)^2tsd$  works when current is low. In this formula, I is actual current, Tsd is actual trip time, tsd is set trip delay time.

When I is over inverse time set value but below  $8I_R$ , controller will operate according to over-current protection characteristic curve. When I is over both of inverse time set value and  $8I_R$ , controller will operate according to definite time protection. The other is definite time protection and set time is 0.1s, 0.2s, 0.3s, and 0.4s.

When I is over  $I_{sd}$  but below  $I_i$ , controller will operate according to definite time protection.

Current Ratings Range( $I_{sd}$ )	tolerance	Current	Action time(s)	Time tolerance
$(1.5\sim 15)I_R$ (OFF can turn off this feature)	$\pm 10\%$	$\leq 0.9I_{sd}$	In the 2tsd Non-trip	
		$>1.1 I_{sd}$	In the 2tsd Delayed-trip	
		tsd	0.1    0.2    0.3    0.4	$\pm 15\%$
		Returnable time	0.06   0.14   0.25   0.33	$\pm 15\%$

Note: a. When the intelligent controller is Frame II ( $I_{nm}=3200A$ ),  $I_{sd}$  shouldn't be more than 40kA.

b. When the intelligent controller is Frame III ( $I_{nm}=5000$ ),  $I_{sd}$  shouldn't be more than 50kA.

c. When tsd is 0.1s or 0.2s, time permissible error is  $\pm 0.040s$ .

◆ Instantaneous protection :

Instantaneous protection trip time should be less than 100ms.

Operating characteristics :

Current Ratings Range( $I_i$ )	tolerance	Current	Time tolerance
$(1.5\sim 20)I_n$ (OFF can turn off this feature)	$\pm 15\%$	$\leq 0.85 I_i$	in the 0.2s Non-trip
		$>1.15 I_i$	in the 0.2s trip

◆ Earthing protection :

Earthing protection has definite time characteristic. Fault delay time is shown below.

## ◆ Operating characteristics of single-phase earthing protection

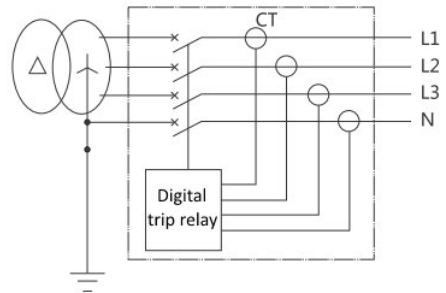

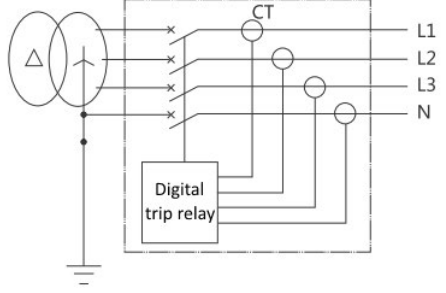

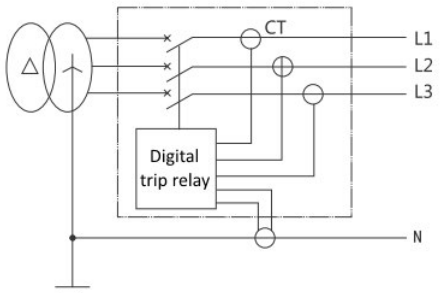

Current Ratings Range(Ig)	tolerance	Current	Action time(s)	Time tolerance
Inm=2000 (0.2~0.8)In Inm=3200, 5000 (500~1200)A (OFF can turn off this feature)	±10%	$\leq 0.9 I_g$	In the 2tg Non-tripping	
		$> 1.1 I_g$	In the $tg \pm 0.032s$ or $tg(1 \pm 25\%)$ Tripping	
		tg	0.1    0.2    0.3    0.4	±15%

Note : a. When tg is 0.1s or 0.2s, time permissible error is  $\pm 0.040s$ ;

b. When Inm is 2000A, Ig shouldn't be more than 1200A.

c. When Inm is 3200A or 5000A, Ig should be between 500A and 1200A.

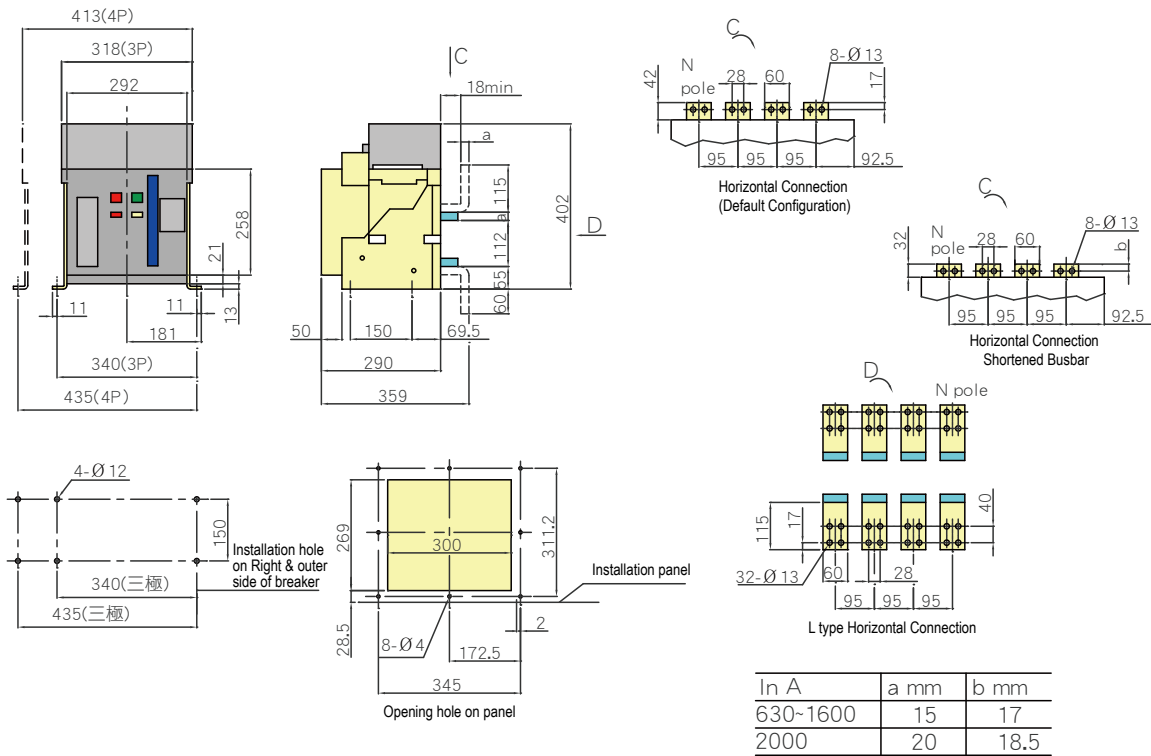

Bolted single-phase protection is usually used in neutral-point solid ground system. Controller has two different protection modes, being vector sum mode and external transformer mode.

<p>In three-phase three-wire system using 3-pole breaker without external transformer, earthing fault signal comes from three- phase current vector sum. Operating characteristic is definite time protection.</p>	
<p>In three-phase four-wire system using 4-pole breaker without external transformer, earthing fault signal comes from three- phase current and N-Pole current vector sum. Operating characteristic is definite time protection.</p>	
<p>In three-phase four-wire system using 3-pole breaker with external N-pole transformer, earthing fault signal comes from three- phase and N-Pole current vector sum. Operating characteristic is definite time protection.</p> <p>Note:</p> <ol style="list-style-type: none"> <li>① External N-pole transformer (connected to 25#, 26# terminal for TAB-2000N-5000) is a special product. Default lead wire is 2 meters long.</li> <li>② Earthing protection in 3PT mode can only be used in balance load. It should be turned off or set value above allowable unbalance current when the load is unbalance or the controller may operate.</li> <li>③ The distance between external transformer and breaker should be less than 5m in (3P+N)T mode. When lead wire of external transformer needs to be longer than 2 meters, special equirement should be noted when ordering.</li> </ol>	

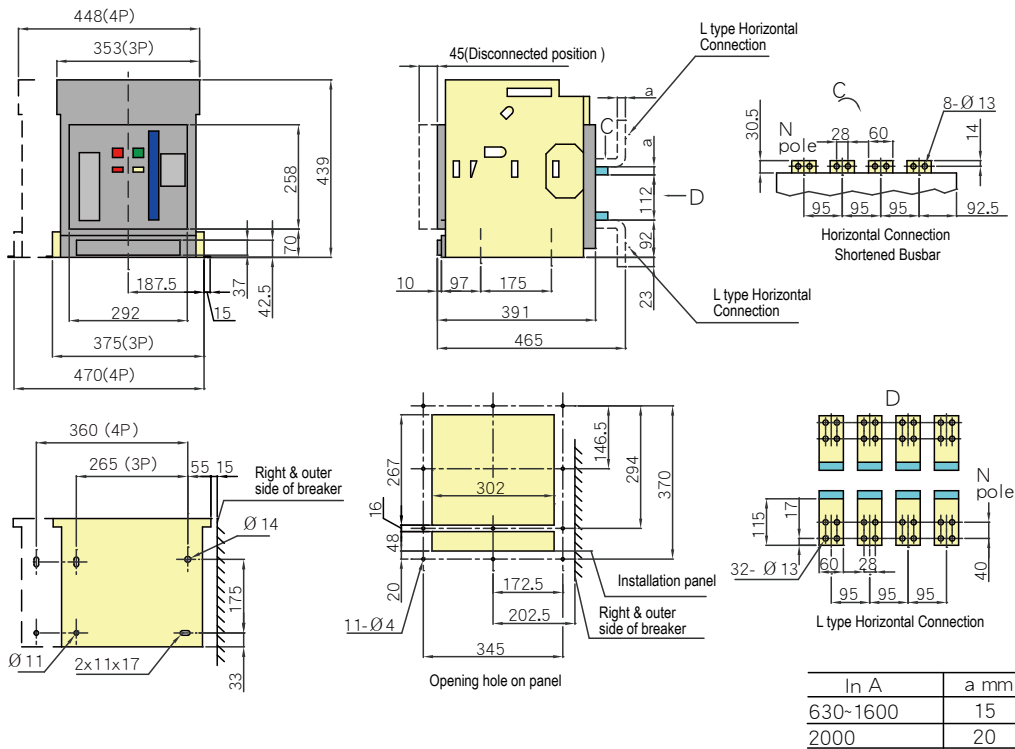

# Dimensions and connection

Unit : mm

## TAB-2000N Fixed-type

## TAB-2000N Drawout-type

**TAB-2000N Drawout-type, Horizontal, rear connection**

Note : The busbar must rotate 90 degrees if user would become the vertical connection.

## Secondary circuit wiring

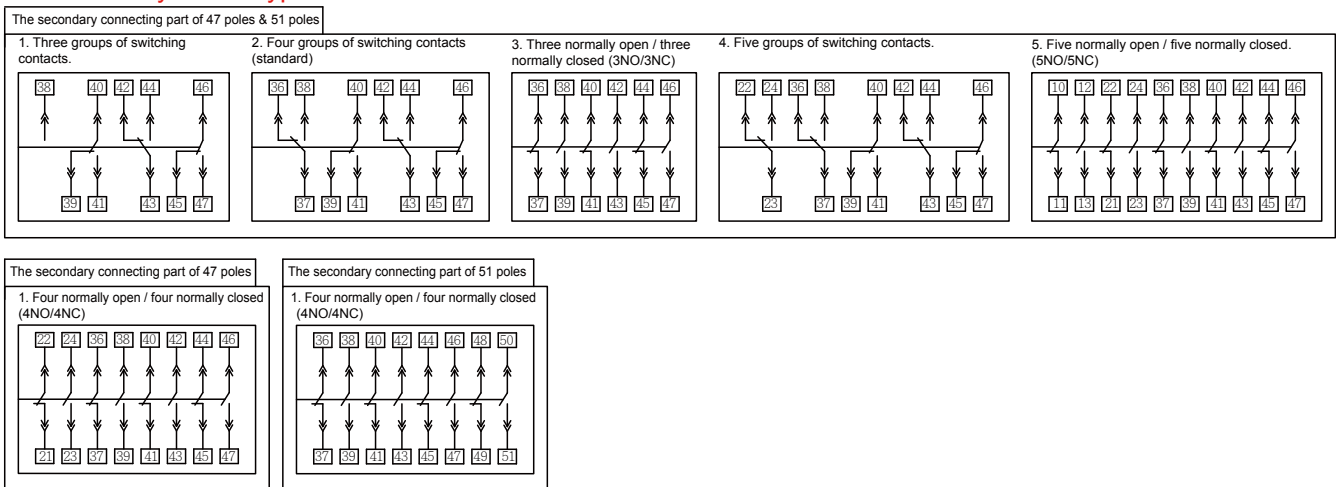

- TAB-2000N/3200 Secondary circuit wiring diagram for the circuit breaker equipped with M/3M type digital trip relay, undervoltage instantaneous release :
- TAB-5000 Secondary circuit wiring diagram for the circuit breaker equipped with M/3M type digital trip relay and undervoltage (instantaneous / time-delay) release :

※ Standard configuration for drawout-type: The secondary connecting part of 47 poles .

※ Standard configuration for fixed-type: The secondary connecting part of 51 poles .

### The auxiliary switch type :

**SB1** : Opening pushbutton ; **SB2** : Emergency opening pushbutton ; **SB3** : Closing button ;

**Q** : Under-voltage release ; **F** : Shunt release ; **X** : Closing electromagnet ; **M** : Energy storage motor ;

**XT** : Terminal ; **SA** : Travel switch ; **FU** : Fuse 6A ; **PL** : Indicating lamp ;

**1#**, **2#** : Digital trip relay power input (Note: When the digital trip relay power is AC power, **1#**, **2#** terminals directly input AC power; **1#** connect positive pole, and **2#** connect negative pole for direct current.)

**3#**, **4#**, **5#** : Fault trip contact output (**4#** common terminal)

**6#**, **7#**, **8#**, **9#** : Auxiliary contact, normal open

**10#~24#** : empty

**25#**, **26#** : to be connected with current transformer of N pole (optional)

**27#**, **28#** : Under-voltage release (optional)

**29#**, **30#** : Shunt release

**31#**, **32#** : Closing release

**33#**, **34#** : Energy storage indicator

**34#**, **35#** : Energy storage motor

**36#~51#** : Auxiliary contact

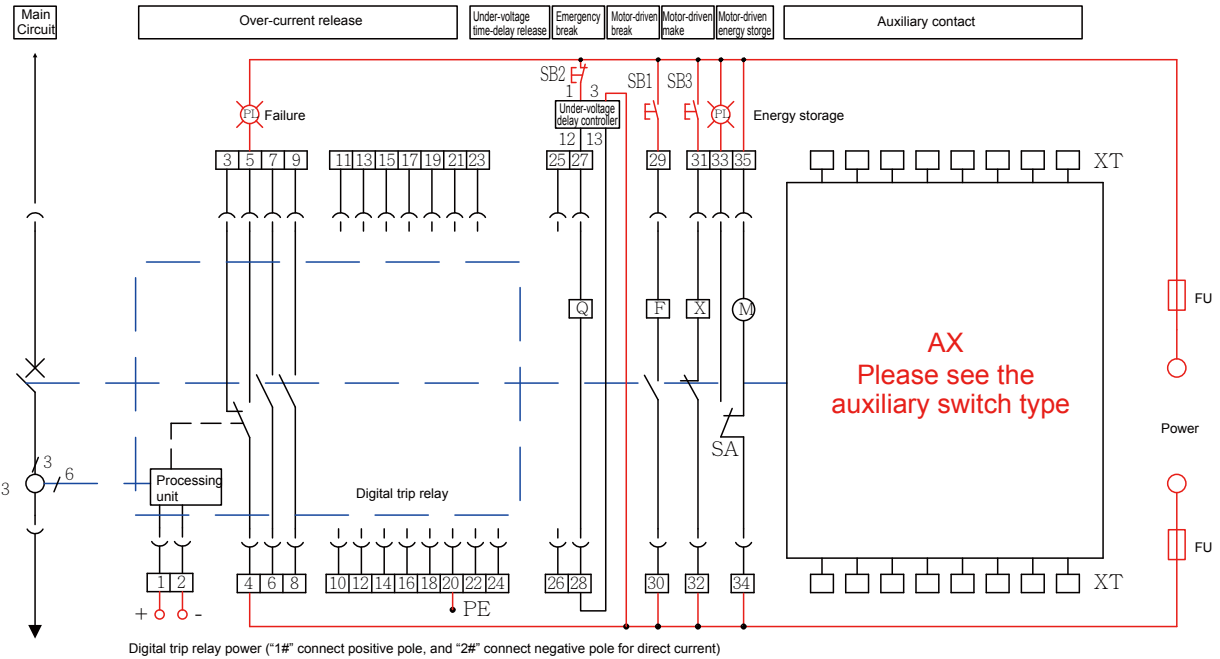

Note : 1. Red colored part is to be connected by users.

2. Terminals **6#**, **7#** can output NC(normal close) contact if that is required by users.

3. Terminal **35#** can be directly connected to power (automatic pre-storing energy), alternatively connect power after connecting NO button (manual-controlled pre-storing energy.)

4. When the emergency opening pushbutton is used to disconnect the circuit breaker, attention should be paid that if the undervoltage release has the delay function, after pressing the emergency opening pushbutton, the circuit breaker can be switched off after passing through the setting time of undervoltage delay.

Protection characteristic of digital trip relay	Protection function settable range and conventional factory tuning	Ir long delay current setting range : (0.4~1)In		Conventional factory tuning : overload delay 1.0In	
		Overload 1.5Ir action time setting range : 15, 30, 60.....480s		Conventional factory tuning : overload 1.5In : action 15s	
		Isd short delay current setting range : (1.5~15)Ir		Conventional factory tuning : short delay current 8IR	
		Short delay action time : (0.1~0.4)s		Conventional factory tuning : short delay action time 0.4s	
li instantaneous current setting range : (1.5~20)In / 50kA / 65kA / 75kA		Conventional factory tuning : 12In			
lg earthing protection current setting range : (0.2~0.8)In		Conventional factory tuning : 0.5In			
the earthing protection time setting range : (0.1~0.4)s		Conventional factory tuning : OFF			

Remark: The casing current, rated current and auxiliary control voltage must be specified when ordering.

Note 1. Please mark "✓" or fill figure in the relative "□" if no mark, we will provide according to conventional.

2. The operational function of the digital trip relay and special requirements require additional costs.

3. If external current transformer used on 3 poles product, please state external current transformer (3P+N) when ordering.

4. Assemble fixed-plate before put on phases barrier for fixed-type product, but not for draw out-type product.

5. The digital trip relay with the DC 110V/220V can connect terminal 1# and 2# of the secondary connecting part only if the power supply module is changed to the dc24V.
